Strannik Technology

An original technology platform comprising Strannik Virtual Scanning & Strannik Light Therapy.

The first technology to be based upon a mathematical model of the consequences of cognitive input upon the function of the brain, the neural networks, the autonomic nervous system and physiological system and how this is manifest as changes to cellular & molecular biology.

*Discovery Consists In Seeing What Every Body Else Has Seen and Thinking What Nobody Else Has Thought.
Albert Szent-Gyorgi*

'Hello, I'm Elena Ewing, Medical Director and Training Manager of Mimex Montague Healthcare. I'm medically trained and have spent 9 years practicing as an ophthalmic surgeon, and a further 4 years as a dermatologist/venereologist/ hygienist.

Strannik technology is a digital innovation which may be able to improve the quality of your life. It is a more advanced technology concept than genetic screening. It is based upon a mathematical model of the autonomic nervous system and physiological systems. There is no other comparable technology. It comprises two basic elements: Strannik Virtual Scanning (SVS) & Strannik Light Therapy (SLT). SVS is able to determine the onset and progression of medical conditions in a level of detail and sophistication which is unprecedented in modern medicine. Initial research by various researchers/clinicians has illustrated that the technology is typically 2-23% more accurate when compared to the range of medical technologies which are routinely deployed in the medical clinic. Initial

research by various researchers/clinicians has illustrated that SLT is 83-96% effective. This compares with the 50% effectiveness of most drugs (Spear BB, Heath-Chiozzi M, Huff J, 2001)'.

Medical professional, complementary health practitioner and lecturer in midwifery:

"This is just phenomenal - working within the health service for so long as a square peg in a round hole has always been a difficulty but I have always thought that there was something out there that would revolutionise medical care".

Practitioner Training Courses

Bespoke training courses are run as required. The amount of time required for each practitioner depends upon their skill with computers and their medical knowledge and/or training. Although the software is easily installed in the patient's laptop some practitioners require some assistance to do so. We can train medically qualified personnel in typically 2 hours. Practitioners may prefer to have an in-depth training course of typically 2 days duration.

Wonderful. The course was intelligently run and with a realistic timetable. As a professional practitioner I welcomed such an approach. It was a pleasure to work with people who knew their subject. As for the subject? Well! My energy is through the ceiling. I feel better than I have felt in five years since pneumonia. If it sits still long enough I clean it or paint it. I feel great. So many thanks and I will spread the word of this phenomena wherever and whenever I can.

Eileen McShane ANSR D.Hom., M.H.M.A. (uk) D.NLP

There are, in truth, no specialties in medicine, since to know fully many of the most important diseases a man must be familiar with their manifestations in many organs. William Osler

I am writing to thank you both for helping me successfully complete my Virtual Scanning training course. I have to say that I found the training to be thorough, professional and delivered at the right pace and in a relaxed manner and, I was made to feel both welcome and at ease. Also, Elena's training as a medical Doctor and ophthalmic specialist allowed her to comprehensively cover and relate in detail all the relevant course material, as well as answer in depth all of the questions that I had. I really enjoyed learning to use and apply the incredible Virtual Scanner technology and am now eager to start to put it to good use. I wish you both continued success, and thank you for your continued support. I would have no hesitation in recommending the Virtual Scanning training course to anyone.

Dr. Frank McBride B.Sc PgC DC (Registered Chiropractor)

This technology is registered with the health regulator in the UK so it is CE-registered as a type 1 medical device (as a Z301 standalone software). In the US technologies of this type are classified as Class 1 and Class 2 exempt technologies. Strannik has been in use since 2001. We have many case studies of people who have successfully used Strannik, many of these published in peer-reviewed medical journals. We have testimonials from patients, practitioners, doctors and editors of medical journals. Our article 'A further review of the genetic and phenotypic nature of diabetes mellitus' has been downloaded 550 times and is a highly successful article. Our bibliography can be viewed on LinkedIn or Research Gate.

Medical student:

"This is the future of medicine".

'It takes 50 years to get a wrong idea out of Medicine, and 100 years a right one into Medicine.'
John Hughlings Jackson, FRS (4 March 1835 - 7 October 1911)

Hello, I'm Graham Ewing, CEO of Mimex Montague Healthcare Limited. I started this project in 2003. In 2006 I commissioned work by Dr Alexander Hankey to compile several articles for publication in medical journals which would explain the scientific rationale for Strannik technology. I observed this process and thereafter set to work in my efforts to expand the scientific rationale for this technology and to demonstrate its value re the diagnosis and treatment of various cognitive, psychological and medical conditions. As a result I am now author of over 50 medical articles and have published two books. There are very few researchers working in this area who have such an extensive bibliography. Indeed there are very few medical doctors who are so widely published. I am regularly invited to submit short commentaries, editorials, and papers to medical journals; to make presentations of this work at medical conferences throughout the world; and to compile chapters for inclusion in books. My rating on ResearchGate is 13.57 which makes me a respectable mid-ranked researcher.

Strannik technology is based upon an understanding of the mechanisms which the brain uses to regulate the body's function. It is the ideal digital technology for the 21st century. **The benefits of this technology for the practitioner are summarised as follows:**

- **Easily installed Software - just follow the installation instructions**
- **Technical Support to Assist with Installation and Training**
- Pay-as you-go model: **No-up Front Costs**. There is no need to make an expensive outlay for equipment
- **More comprehensive test results than any existing medical technology**
- **More cost-effective than any other medical screening technology** in orthodox biomedicine or complementary & alternative medicine.
- **A world-leading medical technology** which is based upon the Highest Scientific Principles
- **More effective therapeutic outcomes than any other alternative medical technology**
- Regulatory Status: **EC registered technology (CE-marked)**. FDA Class 1 & 2 Exempt.
